Week 1 - WPII and DBII

A. Camariana, E. Touray & E. Faal

In this week, we will look at the fundamentals of web application development. What are the parts and technologies used to develop web applications

Topics

- [What is a web server?](#)
- [Introduction to the server-side](#)
- [Client-Server overview](#)
- [Server-side web frameworks](#)

Note:

All the concepts on the topics above are dry, without looking at a live example of what is said there. For now just go through and read the notes for the first time and we will discuss the concepts briefly.

Up coming week(s), once we implement the phonebook, we will come back to delve deeper into the concepts discussed

Class Work 1

Take all the contacts from your phone and put it into MS Excel using the following example

first-name	minit	last-name	primary-phone	secondary-phone (optional)	email (optional)	addres
Muhammed	L	Sanneh	123-4567		ms@gmail.com	Brikan
Phatima		Camara	123-4567	786-4567	pha@gmail.com	Brusut
